TABLE 8:
Mercury: Regulatory Overview

(Title III)=Emergency Planning and Community

Right to Know Act

Fish Water

Groundwater Drinking Water
Bottled Water OSHA standards

Water (level of detect) Sludge Hazardous Waste Compost

Table Explanation

Mercury regulations include (1) use- and release-related regulations that specify the requirements associated with using or releasing mercury, and (2) environmental standards, which specify a maximum acceptable mercury concentration in different media, and thus may indirectly influence mercury release levels.

Specific statutes regulate mercury in each of these different categories.

The charts above illustrate the different types of use and release regulations, and the different media that have mercury limits.
